## INTENDED USE

The CodeLine Model 80A30 Fiberglass RO Pressure Vessel is designed for continuous, long-term use as a housing for reverse osmosis membrane elements to desalt typical brackish waters at pressures up to 300 psi. Any make of eight-inch nominal diameter spiral-wound element is easily accommodated; the appropriate interfacing hardware for the element specified is furnished with the vessel.

The CodeLine Model 80A30 is designed in accordance with the engineering standards of the Boiler and Pressure Vessel Code of the American Society of Mechanical Engineers (ASME Code). At small additional cost. vessels can be inspected during construction by an ASME Authorized Inspector and ASME Code stamped.

The CodeLine Model 80A30 must be installed, operated and maintained in accordance with the precautions listed and good industrial practice to assure safe operation over a long service life.

The high performance reinforced plastic shell must be allowed to expand under pressure; undue restraint at support points or piping connections can cause leaks to develop in the shell. This side-ported vessel requires special precautions in mounting and connection to piping so that the vessel will not be subjected to excessive stress due to bending moments acting at the side openings in the fiberglass shell.

The end closures, incorporating close-fitting, interlocking metal components, must be kept dry and free of corrosion: deterioration can lead to catastrophic mechanical failure of the heads.

Pentair Water will assist the purchaser in determining the suitability of this standard vessel for their specific operating conditions. The final determination however, including evaluation of the standard materials of construction for compatibility with the specific corrosive environment, shall be the responsibilty of the purchaser. Alternate materials with enhanced corrosion resistance are available on special order.

Specifications subject to change without notice.

## **PRECAUTIONS**

- DO... read, understand and follow all instructions: failure to take every precaution will void warranty and may result in vessel failure
- DO... mount shell centered on horizontal members spaced at recomended span(s) "S" using compliant mounting hardware furnished: tighten hold down straps just snug
- DO... alian and center side ports with the manifold header; correct causes of misalianment in a row of vessels connected to the same header
- DO... use flexible type grooved-end pipe couplings, Victaulic® Style 77 or equal, at sideports; allow full .125 inch gap between port and piping, and position piping to maximize flexibility of connection
- DO... provide flexibility in, and support for piping manifold so that vessel can grow in length under pressure without undue restraint; provide additional flexible joints in large pipes leading to manifold header
- DO... provide overpressure protection for vessel set at not more than 105% of design pressure
- DO... inspect end closures regularly; replace components that have deteriorated and correct causes of
- DO NOT... work on any component until first verifying that pressure is relieved from vessel
- DO NOT... make rigid piping connections to ports or clamp vessel in any way that restricts growth of fiberalass shell under pressure; ADIA = 0.015 in. (0.4mm) and  $\triangle L = 0.2$  in. (5mm) for a length code -7 vessel
- DO NOT... hang piping manifolds from ports or use vessel in any way to support other components
- DO NOT... tighten Permeate Port connection more than one turn past hand tight
- DO NOT... operate vessel without connecting both Permeate Ports internally to a complete set of elements or otherwise plug ports internally so that external piping connection is not subjected to feed pressure
- DO NOT... install Spacer on downstream end of vessel DO NOT... operate vessel without Thrust Cone installed
- downstream DO NOT... pressurize vessel until double checking to verify
- that the Retaining Ring is in place and fully seated. DO NOT... operate vessel at pressures and temperatures
- in excess of its rating
- DO NOT... operate vessel with permeate pressure in excess of 125 psi at 120°F (0.86 MPa at 49°C)
- DO NOT... tolerate leaks or allow end closures to be routinely wetted in any way
- DO NOT... operate at pH levels below 3 or above 10

NOTE

Spiral Retaining Ring Removal Tool (50303) recommended to open and close vessel.

For complete information on proper use of this vessel please refer to the 80A Series USER'S GUIDE, Bulletin 519014

## **ORDERING**

Using the chart below, please check the features you require and fax them with your purchase order to our customer service department for expedited processing.

For optional materials and or feature not listed below, please consult the factory for pricing and availability.

Please note that we require your membrane brand and model number when ordering. If this information is not initially available, you may provide it at a later date by checking the appropriate box below

VESSEL LENGTH CODE - please check one MODEL 80A30 -1 -2 -3 -4 -5 -6 -7 EXTERIOR FINISH - please check one

☐ Standard - white high-gloss polyurethane coating over sanded surface.

Please supply adapters for the following membrane brand and specific model.

Option - optional colors are available for 50 or more vessels per order. Call factory for pricina details.

CERTIFICATION - please check one

	ASME	Stamped	and	National	Board	Registered	(please	consult	factory	for	pricing).

_																

Option Ultrapure package for ultrapure / high temperature operation. Includes: One 316 SS 1 1/2" permeate port with a type 3A sanitary connection. (6.3" Port Offset) One PET permeate port with 1" FNPT threads.

One standard PET adapter and one solid adapter (to plug the PET permeate port). Option Sanitary package for sanitary / high temperature operation.

Same as the ultrapure package but also includes

Two each feed / concentrate ports with 2" type 3A sanitary connections. Option High Temperature package for high temperature operation only.

Includes two PET permeate ports instead of the standard PVC material. Option Customer specified port configuration. Using the chart below, please indicate the custom options

you require for each end of the pressure vessel (many options are required only at one end). Please consult the factory as these options will affect pricing and vessel lead time.

Serial number Opposite PERMEATE PORT MATERIAL end

Standard - PVC	Thermoplastic	(for applications up	to 120°F)

Option - PET Thermoplastic (for up to 176°F and high back pressure operation) Option - 316L Stainless Steel (for up to 190°F and high back pressure operation) 

PERMEATE PORT CONFIGURATION

Standard - 1" NPT Female Threads: 4.5" Port Offset

Option - 3/4" NPT Female Threads; 4.5" Port Offset Option - 1/2" NPT Female Threads: 4.5" Port Offset

Option - 1 1/2" IPS Grooved End; 7.71" Port Offset Option - 1 1/4" IPS Grooved End: 6.35" Port Offset

FEED PORT CONFIGURATION

Standard - 1 1/2" IPS pipe, grooved ends, with ports in-line Optional - Multi-Ports . increased port diameter or port clocking Using the instructions in Order specification sheet # 519017 please fill out your feed port configuration in the space below.

List port location first followed by port size for each choice. 2 1/2" ports & 2" Sanitary ports are not allowed 90° from any other port size.
